

Linear Unit MRJ 80

The MRJ linear units have toothed belt drive and compact dimensions to provide high performance features such as high speed and good accuracy. For very high speeds, up to 10 m/s, the track rollers (journal bearings) of the type MRJ are particularly suitable.

The unit MRJ have a pre-tensioned steel reinforced AT polyurethane timing toothed belt.

In conjunction with a zero-backlash drive pulley high moments with alternating loads with good positioning accuracy, low wear and low noise can be realized.

All parts in the profile are protected from dust and other contaminations. As corrosion-resistant protection strip is available as option.

Dimensions in mm.

Modulus of Elasticity: $E = 70000 \text{ N/mm}^2$

Operating Temperature (°C): 0 ~ +60 For operating temperature out of the presented range, please contact Rollco.

Duty Cycle: 100%

Max. Acceleration (m/s²): 50 (Optional, acceleration up to 70 m/s² possible if used without INOX seal strip)

Max. Travel Speed (m/s): 1.5 (Optional, travel speed up to 10 m/s possible if used without INOX seal strip)

1. Drive block with pulley
2. Corrosion-resistant protection strip (available also without protection strip)
3. AT polyurethane toothed belt with steel tension cords
4. Carriage with built-in magnets
5. Aluminium profile-hard anodized
6. Track roller (journal bearing)
7. Two hardened steel round guide (58/60 HRC)
8. Central lubrication port, both sides
9. Tension end with integrated belt tensioning system

Deflection of the linear unit

MRJ 80

Deflection of the linear unit

Fixed - fixed mounting

δ Maximum deflection of the linear unit [mm]
 δ_{max} Maximum permissible deflection of the linear unit [mm]
 F Applied force [N]
 L_p Unsupported profile length [mm]

Fixed - free mounting

The maximum permissible deflection δ_{max} must not be exceeded. In the case that maximum deflection δ exceeds the maximum permissible deflection δ_{max} additional profile supports are needed.

- ① The linear units do not include any safety stroke.
 Absolute stroke = Effective stroke + 2 x safety stroke

- ① Journal with or without keyway ② All dimensions in mm. Drawings scales are not equal

④ The linear units do not include any safety stroke.
 $\text{Absolute stroke} = \text{Effective stroke} + 2 \times \text{safety stroke}$

The technical drawing consists of three views:

- A-A**: Front view of the assembly. It shows a rectangular base plate with a central reed switch mechanism. Dimensions include a total width of 79 mm, a base width of 80 mm, and various vertical offsets from the top edge: 100 mm to the top of the base, 80 mm to the top of the internal frame, 63 mm to the top of the reed switch housing, 52 mm to the top of the reed switch contacts, and 18 mm to the bottom of the reed switch contacts.
- C**: Side view from the left. It shows the profile of the reed switch housing. Dimensions include a total height of 3.4 mm, a base thickness of 6.7 mm, a mounting hole diameter of 4.7 mm, and a base width of 7 mm.
- D**: Side view from the right. It shows the profile of the reed switch housing. Dimensions include a total height of 2.5 mm, a base thickness of 9 mm, a mounting hole diameter of 5.2 mm, a base width of 5 mm, and a base length of 8.5 mm.

Linear Unit MRJ 80

Double-Carriage

$$L = \text{Effective stroke} + 2 \times \text{Safety stroke} + L_v + A + 42 \text{ mm}$$

$$L_{\text{total}} = L + 215 \text{ mm}$$

$A \geq L_v + 30 \text{ mm}$

Defining of the linear unit length

$$L = \text{Effective stroke} + 2 \times \text{Safety stroke} + L_v + 42 \text{ mm}$$

$$L_{\text{total}} = L + 215 \text{ mm}$$

$$L_v - \text{Long carriage} = 260 \text{ mm}$$

$$L_v - \text{Short carriage} = 170 \text{ mm}$$

Left side (L)

Right side (R)

General data

For lengths/stroke over the stated value in the table, please contact Rollco. Values for max. stroke are not valid for double carriage (equation of defining the linear unit length for particular size of the linear unit needs to be used).

For minimum stroke below the stated value in the table, please contact Rollco.

Recommended values of loads

All the data of static and dynamic moments and load capacities stated in the table are theoretical without considering any safety factor. The safety factor depends on the application and its requested safety. We recommend a minimum safety factor ($f_s = 5.0$).

Modulus of elasticity

$E = 70000 \text{ N / mm}^2$

General data double carriage

A - Distance between carriages.

Max. travel speed and max. acceleration of linear unit with the corrosion-resistant protection strip is 1,5 m/s and 50 m/s² respectively.

The stated values are for strokes up to 500 mm. No load torque value increases with stroke elongation.

Max. acceleration (m/s²): 70

For acceleration over the stated value, please contact Rollco.

Designation	Carriage version	Load Capacity Cy (N)	Load Capacity Cz (N)	Dynamic Moment Mx (Nm)	Dynamic Moment My (Nm)
